

Confidently protect and track delivery of your intellectual property

PosteCS™ is an electronic document delivery service that allows you to send large documents securely with speed and convenience to anyone with an email address and a web browser. It is also ideal for replacing paper-based processes with electronic transactions—where it be one-to-one or many-to-many.

The secure electronic document and messaging solution

PosteCS lets senders securely deliver highly confidential, large documents by email. Real time tracking shows when documents were sent, your customers notified and when they received the documents.

Safeguard confidentiality

Our sophisticated, yet easy to use, encryption technology, password protection and documented proof that messages are sent and received, fulfills the need to protect confidentiality.

Any file. Any size. Any time.

Conveniently send documents of any size to anyone (with required hardware and connection) with an email address and web browser.

Cost-effective

With PosteCS volume based pricing the higher the usage, the lower the price.

Integrate painlessly

PosteCS gives you ready-to-use technology to send, protect, store and track. It can also integrate with your existing email system or legacy systems.

Simplify your workflow

Use PosteCS to streamline routines and boost productivity with automation tools that will send and manage large volumes of statements, contracts, invoices, purchase orders, and much more.

Avoid frustration and delays

Our PosteCS system can handle a large volume of transactions per minute.

Get serious about security

Corporate information should never be sent by unprotected email as there is a significant risk associated with the information being intercepted or compromised. When you would never send your credit card number by email, you certainly should never send competitively sensitive intellectual property by email either.

Turn electronic delivery into a professional advantage

Respecting confidentiality isn't a frill. It's a professional necessity. In an electronic era, where secure and speedy communication is also a hallmark of professionalism, PosteCS gives you the edge

Real-Time tracking

Track in one easy to read table each file in real time through every step of the process, from the time you send your e-documents to the time receivers are notified and access them.

Electronic Postmark

Canada Post's Electronic Postmark electronically stamps the date and time that your e-document was sent on the file and confirms that the integrity of the file has not been compromised.

More secure than your groupware email system

Groupware email systems like Lotus Notes® or Microsoft Outlook® may not always be secure outside your company and must rely on both companies having the same system.

What our customers are saying about PosteCS

Having been in this business for over 10 years, Canada Post has earned its reputation as a trusted third-party to deliver confidential information.

- A Fortune 500 International Consulting firm finds PosteCS "a very cost-effective method of transferring our data files. We've had 100% success." *
- A leading digital media company points out that because, "we can track when clients receive files, we can rest easy that we've met their deadlines." *
- "PosteCS is also advantageous to our clients," notes the digital media company. "They get files exactly as we sent them, with no distortion." *
- Consultant, Specwright architect, Ann Ebert cites PosteCS's "efficiency for my home office, especially the record of when work has been sent and received." *

The delivery assurance and security of Registered Mail—online.

Electronic Postmark

Allows you to protect the integrity of your electronic data and content with Auditable Time Stamps, Digital Signatures, and Hash Codes.
